5th. March. 2025

VITAMIN

01

It is understood that the supply of niacinamide raw materials is tight and the cost is on the rise. Due to factors such as production plan adjustments, some factories are expected to face pressure on the March delivery period, and the overall factory delivery time is tight. At present, the market price of niacinamide has been slightly raised, and the current transaction price in the foreign market is about US\$4.8-5.0. The market inquiry is active and the attention is high. Given that the current price of niacinamide products is still at a relatively low level, coupled with continued cost pressure, there is a possibility of further price increases in the future.

According to the latest market news, on March 4, a domestic mainstream vitamin B6 manufacturer announced the suspension of quotations and signing of new contracts.

AMINO ACID

02

Tryptophan: Manufacturers' quotations were lowered to USD6.92/kg, and the transaction was average. The quotations in the trade market followed the weak trend. Currently, there is no boost to downstream demand, and users are not in a mood to replenish stocks. The market transaction slowed down, and the price was slightly weak. Pay attention to the transaction of enterprises. It is expected that the price of tryptophan may be stable but weak.

API

03

Enrofloxacin/Ciprofloxacin Hydrochloride, the supply of raw materials has been tight recently, the delivery of domestic mainstream factories has become tight, and the quotation has been slightly raised. The export transaction of enrofloxacin above tonnage level is around USD22.9/KG. The transaction of ciprofloxacin hydrochloride is USD23.5/KG. The market of Enrofloxacin and Ciprofloxacin Hydrochloride is tight at present, and there is a trend of price increase in the future. We will continue to pay attention to the market transaction situation.

FOOD ADDITIVE

04

Recently, Korean researchers published a comparative study article in the journal Nutrients, evaluating the effects of MH-Pro (a product made of Lactobacillus rhamnosus CBT-LR5, skim milk, maltose, glucose, milk flavor and starch) on cognitive function in elderly people suspected of suffering from mild cognitive impairment (MCI), which attracted attention in the industry.
